# Calling Features

## Call Screening

Use Call Screening to ensure you receive important calls. You can limit the callers that ring your phone, filter callers, or forward important callers to another number.

Calls from anonymous callers, or other callers, can be given special treatment, such as being blocked, forwarded to another phone number (like your mobile), or having a custom ring pattern assigned. These settings can be configured via star code (below) or in the portal.

### National Do Not Call Registry

You can also reduce the number of unwanted sales calls you get by signing up for the National Do Not Call Registry. It's free! Visit [www.donotcall.gov](http://www.donotcall.gov) to register your number.

## All Other Callers

If you don't want to receive calls from anyone, use this feature to block all callers and then enable only custom (specific) callers to reach you.

## Switching Calls

When Call Waiting is enabled on your phone, you can switch between your current call and a new incoming call:

- When notified of a second incoming call, press the line button on your phone.
- Your first call will be placed on hold, and your second call will be active.
- You can switch between the two calls by pressing the line button for the call you want to switch to.

## Caller ID

Caller ID, the calling name (CNAM) and phone number (CLID) sent with outbound calls, is a setting on each phone number. You can choose to send out the main company number, a number assigned to the line, or no caller ID at all. If the name on your caller ID is incorrect, please contact Customer Support to update it.

### Caller ID for Mobile Phones

Most mobile phone carriers do not send the CNAM because mobile phones look up the calling phone number in the device's contact list. Also, calls to 911 will always send the 911 callback number set on the device, regardless of your caller ID settings.
